

My amateur callsign is K2ORC. Please note my opposition to the proposal to create subbands within the 160 meter amateur operating frequency. One of amateur radio's proud traditions has been the ham community's ability to police itself. This has worked for a long time and continues to work today. It is difficult to understand why it has suddenly become necessary for fences to be erected inside one of the most wide open operating frequencies we have. Please allow us to address matters involving modes of operation on the bands within our own community. The FCC has better things to do. Paul Goodman K2ORC
